Noble Energy Science Park at the Madatech – Israel's National Museum of Science, Technology & Space

The Madatech - Israel's National Museum of Science is located in the heart of a seven acres campus in midtown historic Haifa. The two buildings on campus, designated for science exhibitions and education, were designed by Alexander Baerwald and date back to 1912. Lying alongside the steepest street in Haifa, the park sprawls between these two landmark buildings, bridging their five meters floor level gap with its undulating topography and serves as a continual link to the museum's indoors exhibitions.

Designed as an outdoor science museum the park juxtaposes a natural setup of trees and water with giant interactive exhibits using wind, sun and water, to demonstrate scientific principles.

The site's topography generated the principal of movement in the park, where visitors climb, almost unconsciously, through series of seven thematic courtyards, each focuses on the discovery of a noted scientist and descends back to the start point. The serpentines of waterfalls and dams, all dedicated to theme of water, link all courtyards together with an open- air amphitheater which serves for public assemblies and performances.
